Appeal from the United States District Court  
for the Southern District of Texas  
USDC No. 3:22-CV-184  
\_\_\_\_\_

Before CLEMENT, ELROD, and WILLETT, *Circuit Judges.*

DON R. WILLETT, *Circuit Judge:*

" You are not a horse."

Or so the Food and Drug Administration (FDA) alerted millions of Americans via social media, midway through the COVID-19 pandemic. The agency had discerned that some people were treating their symptoms using the animal version of a drug called ivermectin. FDA decided to target that practice vi—and others like in The messáging message

No. 22-40802

traveled widely across legacy and online media. Left unmentioned in most of that messaging: ivermectin also comes in a human version. And while the human version of ivermectin is not FDA-approved to treat the coronavirus, some people were using it off-label for that purpose.

The Appellants are three medical Doctors who prescribed the human version of ivermectin to thousands of their patients. Each Doctor says that FDA's message interfered with their own individual medical practice. The Doctors sued FDA and the Department of Health and Human Services (together, they also sued two governmental) employees in their official capacity. The Doctors argue that FDA's "Official" "horrible" message and similar public statements (together, the "Posts") violate FDA's enabling and the Administrative Procedure Act ("APA"). The district court held that sovereign immunity protects the Agencies and the Officials, and it dismissed the suit. We disagree.

First, the Doctors can use the APA to bypass sovereign immunity and assert their *ultra vires* claims against the Agencies and the Officials. FDA is not a physician. Thus, assuming FDA is correct that we must consider the merits to some degree even at the pleading stage, the Posts that issue medical advice to consumers are plausibly *ultra vires*. The Posts are plausibly agency action, too, because they publicly announce the general principle that consumers should not use ivermectin to treat the coronavirus, and because the Doctors fall within the Act's Second, because the Doctors can use the APA for their *ultra vires* claims, we need not consider the common-law version of that doctrine. Third, however, the Doctors' pure APA claim cannot go forward. That is because the Posts do not determine legal rights and thus lack the finality. Even though this last theory fails, the Doctors' first theory is enough to allow this suit to proceed.

**We REVERSE and REMAND.**

No. 22-40802

I

A

Ivermectin is a drug. About eighteen months into the COVID-19 pandemic, the Food and Drug Administration released an informal "Consumer Update" titled "Why You Should or Prevent COVID-19" ( " Update" ) ( current version of the Update reads, in part (internal headings omitted):

COVID-19. We've been living with it for seems like forever. Given the number of deaths that have occurred from the disease, it's per some consumers are turning to drugs not approved or authorized by the Food and Drug Administration . . . .

...

There seems to be a growing interest in a drug called ivermectin for the prevention or treatment of COVID-19 in humans. Certain animal formulations of ivermectin such as pour-on, injectable, paste, and "drench," are approved in the U.S. to treat or prevent parasites in animals. For humans, ivermectin tablets are approved at very specific doses to treat some parasitic worms, and there are topical (on the skin) formulations for head lice and skin conditions like rosacea.

However, the FDA has received multiple reports of patients who have required medical attention, including hospitalization, after self-medicating with ivermectin intended for livestock.

- The FDA has not authorized or approved ivermectin for use in preventing or treating COVID-19 in humans or animals. Ivermectin is approved for human use to treat infections caused by some parasitic worms and head lice and skin conditions like rosacea.
- Currently available data do not show ivermectin is effective against COVID-19. Clinical trials assessing

No. 22-40802

ivermectin tablets for the prevention or treatment of COVID-19 in people are ongoing.

- Taking large doses of ivermectin is dangerous.
- If your health care provider writes you an ivermectin prescription, fill it through a legitimate source such as a pharmacy, and take it *exactly* as prescribed.
- Never use medications intended for animals on yourself or other people. Animal ivermectin products are very different from those approved for humans. Use of animal ivermectin for the prevention or treatment of COVID-19 in humans is dangerous.

....

The FDA has not authorized or approved ivermectin for the treatment or prevention of COVID-19 in people or animals. Ivermectin has not been shown to be safe or effective for these indications.

There's information around, and you may have heard that it's okay to not take large d  
okay.

....

Talk to your health care provider about available COVID-19 vaccines and treatment options. Your provider can help determine the best option for you, based on your health history.<sup>1</sup>

FDA also released a document COVID-19 and " F A Q : I v e r m e c t i n I n t e n d e d T o g e t h e r , t h e U p d a t e a n d t h e " ( " F A Q " )  
FAQ total about four pages. In addition to those releases, FDA also posted

---

<sup>1</sup> Food and Drug Admin., *Why You Should Not Use Ivermectin to Treat or Prevent COVID-19* (Dec. 10, 2021), <https://www.fda.gov/consumers/consumer-updates/why-you-should-not-use-ivermectin-treat-or-prevent-covid-19> (emphases in original).

No. 22-40802

four items online between August 2021 and April 2022—one on its website, and three across social media. The website post reads, in part, “take ivermectin to prevent or treat COVID-19. A: No.” The three social media posts are similar. They say, in full:

- “ You are not a horse. You are not a horse. Stop it. ”
- “ You are not a horse. Stop it with ivermectin. Ivermectin is not authorized for treating #COVID. ”
- “ Hold your horses, y’all. Ivermectin is not authorized for treating COVID-19. It still isn’t authorized or approved. ”

The FDA included an image of a horse in each of the three social media posts.

We refer to the Posts as the Update, the FAQ, the website post, and the three social-media posts).

In an internal email, a member of FDA’s communications department referred to the Posts as part of a new engagement strategy. The strategy played well, and media outlets nationwide ran headlines and stories emphasizing FDA’s “horse” messages. The Posts, like the Update, drew note of the Posts, as did pharmacy boards and hospitals. Federal and state courts, too, began citing the Posts in cases involving ivermectin. All told, the Posts—and particularly the Update—saw citations in newspapers, magazines, digital media outlets, medical and professional advisories, legal complaints, and judicial opinions across the Nation.

The Plaintiffs-Appellants in this case are three Doctors who have prescribed the human version of ivermectin to thousands of patients suffering from the coronavirus. The Doctors allege that the Posts interfered with their individual “ability to exercise their professional judgment in medicine.” They also allege that the Posts harmed their reputations. Further, Dr. Apter alleges that he was “

No. 22-40802

... for prescribing ivermectin to treat COVID-19, " and that "[t]he include copies of FDA's [Posts]." Dr. Apter and Dr pharmacies have refused to fill ivermectin prescriptions for their patients because of FDA's Posts. Dr. Bowden also lost his hospital after "tweeting patients with COVID-19." And Dr. Marik lost his position hospital "for promoting the use of iver

B

The Doctors sued FDA, arguing that the Posts are *ultra vires* under FDA's enabling Act <sup>2</sup>APA. The Doctors asked the under the district court to:

- set the Posts aside, and declare them unlawful;
- declare that FDA cannot interfere with the practice of medicine;
- declar ~~E~~DA cannot "statements or directives about how or whether health professionals should use ivermectin off-label to treat patients, and that such FDA actions have no legal effect and do not bind health professionals or patients" and to
- enjoin FDA "from engaging in such actions

FDA moved to dismiss the D o c t complaint under Rule (12)(b)(1), invoking sovereign immunity and arguing that the Doctors lack standing to sue under Article III. While no FDA could have and perhaps

drug.<sup>10</sup> The district court deemed § 396 inapplicable, holding that the section plain text refers only to “devi—most” “drugs.”

Next, the district court concluded that the Posts are not final agency action, and thus that the APA’s waiver of sovereign immunity is also unavailable. The court reasoned that the Posts of the statements determine rights, obligations. Moreover, “the statements do not mark the consummation of the agency’s decision-making process” language indicating that they were made [and that] “additional testimony was added ‘initial’ research was undertaken by court experts no indication the FDA has adopted a legal position, [and] no indication of any future liability on non-complying parties.”<sup>15</sup> The court expressly declined to analyze the Doctors’ hybrid general theory, under which a waiver of sovereign immunity in the APA also waives sovereign immunity for non-statutory causes of action such as *ultra vires* suits.<sup>16</sup>

Because the district court relied on sovereign immunity, it did not address Article III standing. The Doctors timely appealed.

No. 22-40802

## II

The district court had federal-question jurisdiction under 5 U.S.C. § 702 and under 28 U.S.C. §§ 1331, 1346, 1361, and 2201. We have appellate jurisdiction under 28 U.S.C. §§ 1291 and 1292. We review dismissals for sovereign immunity and lack of subject-matter jurisdiction *de novo*,<sup>17</sup> “accept[ing] all factual allegations in the plaintiff’s complaint as true.” [T]he party asserting jurisdiction[] has the burden of subject proving that jurisdiction is present.<sup>19</sup>

## III

We begin with sovereign immunity.

“The United States may not be sued except by consented to suit . . . .”<sup>20</sup> As such, “where the United States has consented to suit or the plaintiff has not met the terms of the statute [authorizing suit,] the court lacks jurisdiction and the action must be dismissed.”<sup>21</sup> The Doctors rely on three theories to overcome sovereign immunity: (1) the *ultra vires* doctrine via the APA, (2) the *ultra vires* doctrine itself, and (3) the APA itself. The district court rejected all three paths.<sup>22</sup>

No. 22-40802

We conclude that the first path is open: the Doctors can use the APA to assert their *ultra vires* claims against the defendants. FDA can inform, but it has identified no authority allowing it to recommend consumers "stop taking medicine." The Doctors can therefore use the APA to assert their *ultra vires* challenge to, and to overcome the sovereign actions immunity that would otherwise protect the Agencies. Accordingly, we need not consider the second path, under which the Doctors attempt to assert their *ultra vires* claims using only the common law. However, we do reject the third path. The Posts are not immunity thus bars the agency Doctor from proceeding solely under the APA's general provis

A

The Doctors can use the APA assert their *ultra vires* claims as a non-statutory cause of action against the Officials and against the Agencies.

1

At common law, "[t]he *ultra vires* exception to sovereign immunity ... provides that 'where the officer's actions beyond those limitations are considered individual and not sovereign acti<sup>23</sup>ōn. Such a c<sup>24</sup>ultra vires [i.e. beyond] his authority and therefore may be made t<sup>25</sup>h<sup>26</sup>e o<sup>27</sup>o<sup>28</sup>bj<sup>29</sup>e<sup>30</sup>ct o<sup>31</sup>f his p<sup>32</sup> exception, a plaintiff must 'do more th<sup>33</sup> officer are ill<sup>34</sup>er<sup>35</sup>g<sup>36</sup>at<sup>37</sup>h<sup>38</sup>e<sup>39</sup>or<sup>40</sup>, u<sup>41</sup>n<sup>42</sup>[at<sup>43</sup>u<sup>44</sup>]th<sup>45</sup>e<sup>46</sup>o<sup>47</sup>ri<sup>48</sup>z<sup>49</sup>o<sup>50</sup>n<sup>51</sup>p<sup>52</sup>dl<sup>53</sup>. a<sup>54</sup>i<sup>55</sup>"n<sup>56</sup> facts sufficient to establish that the officer was a

whatever, ' or without any ' colorable ba  
 Under the common-law *ultra vires* doctrine, then, a strong merits argument is needed to overcome sovereign immunity—even at the pleading stage.

As a threshold matter, FDA argues that we must apply the common law merits-adjacent inquiry *ultra vires* *contra* Doctors' whole—even to the aspects of that claim that the Doctors assert under the APA. Assuming without deciding that FDA is correct about that, we conclude that *ultra vires* claim does merit enough to overcome immunity under the common law, and therefore under the APA as well.

For instance, foremost arguments under the *ultra vires* doctrine is that FDA has statutory authority to share data, facts, and knowledge, but not to recommend treatments or give other medical advice. The argument proceeds along these lines: (1) FDA cannot act without express statutory authority, (2) FDA does not have express authority to recommend against off-label uses of drugs approved for human use, (3) the Posts recommend against ivermectin, therefore (4) the Posts are beyond FDA's authority. We agree that, at this stage, FDA has not offered even a "colorable basis" <sup>27</sup> for rejecting this ar

The district court rejected the third premise, reasoning that FDA, has authority "to make public statements," other FDA echoes the district court's reasoning that it "has inherent authority to communicate. But this approach assumes that the Posts contain only factual statements and

<sup>27</sup> *Id.*

<sup>28</sup> *Apter*, 2022 WL 17578869, at \*5.

No. 22-40802

information, and that they do not contain any medical recommendations or advice. But FDA does not defend that assumption. Nor do we see much supporting the position. On the contrary, **all six of the Posts contain syntax that is imperative rather than declaratory** (for example: " Stop it , " " Stop with the #ivermectin , " and " Q: Should I take COVID-19? A : For that reason, we are unable to draw any analytical distinction between FDA making the Posts versus FDA telling Americans to " Stop acetaminophen or antibiotics.

FDA does not argue that it actually *does* have authority to issue advice (as opposed to information). That is, FDA never disputes what we have labeled as the Doctors' FDA argues only premise, that the Posts *do not contain* advice. For instance, FDA's brief argues " FDA's information a 'direct' to consumers, or anyone do not else, to do or refrain from doing anything." Likewise, FDA's brief says the Posts are " . " At the same time, however, FDA's official brief also concedes that the Posts " p " advise [ d ] Despite these concessions, FDA never points to any authority that allows it to issue recommendations or give medical advice.

Rather, FDA argues that some Posts included a hyperlink that leads to the Update. The Update, in turn, directs consumers to " [ t ] alk to yo health care provider. But not all of the social-media posts included such a link. And even for those Posts that did include a link, the Posts themselves offer advice, not mere information. The same is true of the Update itself. It says: " If your health an ivermectin prescription, fill er writes it through a legitimate source such as a pharmacy, and take it *exactly* as prescri But the Update ' **Should Not Use Ivermectin** " Why You to Treat or Prevent COVID-19" ( emphasis added) . As with Ticket , " the trailing qualifier does n imperative character.

No. 22-40802

Finally, citing the purpose statement that appears in the Act, FDA also argues that its mission is to protect the public pursues its purposes at that authority. " statements cannot override a statute's operation. The Act's text authorizes FDA to issue medical advice or recommendations. FDA's argument from the statute leads nowhere. In sum, while FDA cites plenty of statutory authority allowing it to issue information, it never identifies even colorable authority allowing it to make medical recommendations (at least not without notice and comment). The Doctors can therefore use the *ultra vires* exception to sue the Agencies and the Officials—even if FDA is correct that the heightened, merits-adjacent test for common-law *ultra vires* claims also applies to *ultra vires* claims under the APA.<sup>31</sup>

2

Section 702 of " [ t ] APA generally waives the Federal Government's immunity from a suit ' seeking damages and stating a claim that an agency or an officer or employee thereof acted or failed to act in an official capacity or under color of legal authority.<sup>32</sup> When a plaintiff uses the APA to assert a " non cause of such as an *ultra vires* claim—section 702 " contain

<sup>29</sup> *Rodriguez v. United States*, 480 U.S. 522, 525–26 (1987) (per curiam).

<sup>30</sup> *Sturgeon v. Frost*, 139 S. Ct. 1066, 1086 (2019) (alteration adopted) (internal quotation marks and citation omitted).

<sup>31</sup> The Doctors have identified at least one *argument* that is strong enough to bypass immunity under the common-law *ultra vires* doctrine (and therefore under the APA, too, even if FDA is correct that *ultra vires* claims under the APA face the same hurdle as common-law claims). Therefore, we need not and do not consider the merits of any of the Doctors' *ultra vires* arguments—such as their argument under 21 U.S.C. § 396.

<sup>32</sup> *Match-E-Be-Nash-She-Wish Band of Pottawatomi Indians v. Patchak*, 567 U.S. 209, 215 (2012) (quoting 5 U.S.C. § 702) (emphasis added).

No. 22-40802

separate requirements for establishing  
" First, the plaintiff must identify some  
specific way ...." <sup>34</sup> The action need not be final.<sup>35</sup> " Second, the plaintiff  
must show that [adversely affected or aggrieved by] that  
action ...." <sup>36</sup> To satisfy this second requirement, " the  
establish that the injury he complains  
sought to be protected by the statutory provision whose violation forms the  
legal basis for the Doctors' suit satisfies both . " <sup>37</sup>  
requirements.

<sup>49</sup> *Id.* at 308.

No. 22-40802

else, to do or refrain from doing any act. We are not convinced. As discussed above, each of the Posts contains imperative elements that go beyond mere factual communication. FDA also argues that the Posts cannot be rules because they do not prescribe. Again, we disagree. FDA concedes that it generally recommended that consumers not take ivermectin to prevent or treat COVID-19. "For purposes of determining non-final agency action, we do not see any daylight between an agency that uses imperative language in recommending a general course of action and an agency that uses imperative language in prescribing a policy."

FDA also argues that the Posts are not rules because they are nonbinding, and because they did not mark the end of the agency's decision process. But these arguments conflate the test for determining *action* with the test for determining *finality*. Our caselaw recognizes that "non-final action" would be (instead, we have held that when judicial review is sought pursuant to a . . . non-statutory cause of action that arises completely apart from the general provisions of the APA[,] . . . [t]here is no requirement of 'finality' " for the § 702 "waiver" to apply.<sup>50</sup> So it is here. The Doctor *ultra vires* claim is a non-statutory cause of action. We reject FDA's attempt to impose a finality requirement on sovereign immunity in this context. And we therefore conclude that the Posts qualify as "agency action."

ii

The Doctors are also within the zone of interests that the Act protects. The phrase "zone of interests" appears most

---

<sup>50</sup> *Qureshi v. Holder*, 663 F.3d 778, 781 (5th Cir. 2011).

<sup>51</sup> *Alabama-Coushatta*, 757 F.3d at 489.

No. 22-40802

prudential standing,<sup>52</sup> and it has also popped up in cases discussing whether the plaintiff has a cause of action.<sup>53</sup> But we know of only a single case from this circuit applying the zone-of-interests test in the sovereign-immunity context: *Louisiana v. United States*.<sup>54</sup> That case relied on *Lujan*—a leading case on standing.<sup>55</sup> From that reliance, we surmise that “zone of interests” means the same thing regardless of whether the context is prudential standing, causes of action, or sovereign immunity. At the same time, we also acknowledge that the “zone of interests” test is not a constitutional standing test under Article III, and from a

The zone-of-interests test “is not [a]n especially keeping with Congress’s APA to make agency action presumptively reviewable, require[d] any indication of congressional purpose to benefit the would-be plaintiff.”<sup>56</sup> It is, therefore, “the test is satisfied the zone of interests to be protected . . . by the”<sup>57</sup> that the Supreme Court has “usually included the words ‘arguably’ in the test to indicate that the benefit of *any doubt goes to the plaintiff*.”<sup>58</sup> Review is

## B

As for the Doctors' common-law *ultra vires* claim, we begin by noting that, under our precedent<sup>65</sup> with the *ultra vires* doctrine and other fictions surrounding sovereign immunity" when it amended the APA in 1976.<sup>65</sup> We also note the D.C. Circuit' recent decision holding that common-law *ultra vires* claims are available only when there is no alternative procedure for review.<sup>66</sup> Similarly, the Ninth Circuit has held that common law *ultra vires* claims are available only when APA *ultra vires* claims are not.<sup>67</sup> Moreover, several other circuit courts have applied the common-law doctrine only when APA review was unavailable.<sup>68</sup> Here, because the Doctors can use the APA to assert their *ultra vires* claims, we decline to consider whether the Doctors might also be able to assert their *ultra vires* claims using only the common law version of that doctrine.

## C

While the APA allows the Doctors to assert their *ultra vires* claims against both the Agencies and the Officials, we conclude that the Doctors cannot rely solely on " the general APA provisions of the " [ W] hen judicial review to the general sought provisions of the APA, " a plaintiff who wishes to e waiver of sovereign immunity" must sho

wrong" before agency action.<sup>70</sup> "There are two requirements for finality.<sup>71</sup> First, "the action must mark the end of the decisionmaking process—it must not be of a merely tentative or interlocutory nature."<sup>72</sup> Second, "the action must be one by which the legal rights and obligations of the parties have been determined, or from which legal

The Doctors have not plausibly established the finality test's prong, which requires them to show that FDA's ascertainment of rights and obligations produced obligations, "The Supreme Court has long taken a pragmatic approach to finality, viewing the APA's finality requirement as a flexible one." The Doctors offer three reasons that the Posts are final. Yet even under the Supreme Court's "rights and obligations" test, we cannot conclude that the Posts plausibly determined "rights and obligations," that they plausibly constituted action "from which legal consequences will flow." As a result, the Posts are not final agency action.

First, quoting the panel decision in *Texas v. EEOC*, the Doctors say that "[w]hat matters is practical binding effect on the [action] that affected private parties are reasonably led to believe that failure to

conform will bring adverse effects to the public. <sup>77</sup> But *EEOC* is not as broad as the Doctors contend. The sentence they quote was elaborating on the sentence that preceded it: “*binds its staff or creates a safe agency’s a harbors demonstrates that legal consequences flow from it . . .*” <sup>78</sup> The “practical binding effect—not the public one, is an action that follows the Doctors’” Defendants do not *bind EEOC, and for good* the Guidelines <sup>79</sup> So too for the Doctors’ argument based on *EEOC*. While that word also appears in the *EEOC* case, it refers to an “action [that] binds *it*” —that is, the agency—not an action that binds others.<sup>80</sup> The Posts [of FDA] do not bind staff to a legal position or norms, and their practical effect cannot carry the day.<sup>81</sup>

Second, the Doctors argue that “FDA has created a legal standard that governing entities are regularly relying on to establish the appropriate medical care and dictate the practice of medicine, including by courts in legal proceedings.” Whatever else the Posts “standard” goes too far. None of the cases cited by the Doctors establish FDA’s *de jure* standard. Instead, some courts have relied on the Posts as *factual* evidence of FDA’s views. <sup>82</sup> For example, a Pennsylvania appellate court wrote that “multiple national organizations, including the FDA, AMA, and WHO, have advocated against the use of ivermectin to treat COVID-19 based on the absence of conclusive studies to show

ivermectin is effective at treating COVID-19.<sup>82</sup> That is a statement of fact, not law. The Doctors have not identified any court decision that treated any of the Posts as a legal standard rather than factual evidence. And even if they had, *we* conclude that FDA' s Posts do not set forth a

Third, quoting the panel decision in *Louisiana State v. U.S. Army Corps of Engineers*, the Doctors emphasize that the ~~end to~~ ~~expose~~ s " parties to civil or criminal liability of th<sup>83</sup> But the Doctors emphasize the wrong words—it is the last four that matter most. No post contains FDA' s " v i e e w <sup>84</sup> Whether or not the Posts play a role in exposing the Doctors to legal consequences, that exposure does not trace to any of FDA' ~~legal~~ views. This argument, like the first two, does not show that the Pos obligations, or ca<sup>85</sup>used legal consequenc

The Doctors respond that " legally bi to render agen. ~~when the action in question is clearly~~ ' outside the agency' s statutory authority. The Doctors do not elaborate on this theory, nor do they support it with any citation, so we need not address it further. Even were we inclined to consider the theory, we would likely reject it as conflating an *ultra vires* claim with a claim solely under the APA' s general Ap<sup>r</sup>tævri saild<sup>n</sup>s " clear the agency' s statutory au~~ltra~~*vires*ity" is a

Even though the Posts are " a ~~by which~~ n, " they rights or obligations have been determined, or from which legal consequences

will | | <sup>86</sup>While courts and other institutions may have treated FDA' s views as relevant factual evidence—and may have treated the Posts as containing those views—the Posts themselves do not contain FDA' s " v i e w of the *law*. <sup>87</sup>They therefore lack finality, and that means that a pure APA claim cannot overcome the defendants' s o i m m u n i t y i g n

## IV

Last, FDA urges us to affirm on the alternative basis that the Doctors lack standing under Article III. The d i s t r i c t c o u r t ' s d i s m i s s a l w a s f i n a l , s o t h a t we s have discretion to affirm on any basis that the record supports—including lack of standing.<sup>88</sup> Here, however, we see greater wisdom in remanding for the district court to address standing and any other jurisdictional issues in the first instance. We express no view on those issues, and instead we trust their initial determination to the district court' s s o u n d j u d g m e n t .

## V

FDA is not a physician. It has authority to inform, announce, and apprise—but not to endorse, denounce, or advise. The Doctors have plausibly alleged that FDA' s P o s t s f e l l o n t h e w r o n g s telling *about* and telling *to*. As such, the Doctors can use the APA to assert their *ultra vires* claims against the Agencies and the Officials.

Even tweet-sized doses of personalized medical advice are beyond FDA' s statutory authority. We REVERSE the d i s t r i c t c o u r t ' s dismissal, and we REMAND for further proceedings.
